TRAIN removed
TRAIN same region outside cone
VAL joint H
VAL outside joint H
B Coverage removal does not uniformly raise the gap
Mean gap: HOLE − FULL
C Gap versus conditional action distance
Tie-aware Spearman ρ
Missing points: constant distance (N/A)
D Between-critic predictions can shift together
Mean |minQHOLE − minQFULL|

H = state region AND action cone; outside H can include states in the region with actions outside the cone.
Saved offline probes; TRAIN and VALIDATION separate. Three paired model seeds; no confidence calibration or policy inference.
